

For the first time, advertisers, website owners and publishers have true insight into digital campaign performance.

It's a long-standing industry conundrum: how to accurately measure and profile online audiences in our increasingly complex, fragmented and privacy-conscious world? *Roy Morgan Audiences* provides the solution, transforming how publishers, advertisers and media agencies understand and measure online audiences.

Built on a next-generation technology platform developed by Telstra, *Roy Morgan Audiences* gives you a statistically robust, census-standard view of the unique audience viewing your website or digital campaign across multiple devices.

It allows Roy Morgan to identify the Helix Personas connected to over 19 million mobile and broadband devices, without compromising individual privacy and without relying on cookies.

Not only is *Roy Morgan Audiences* highly accurate and easy to implement, it is also completely cross-screen aware. Are you ready to see your online audience in a new light?

Benefits

- A real people based measure
- Connects online and offline data in real time to measure the audience of your website or digital campaign
- Reports cumulative audience reach and frequency
- Measures website performance by unique audience and impressions
- Measures campaign performance by unique audience and impressions and clicks
- Profiles audience by location, device, age and gender, and browser
- Segments audiences through Helix Personas and Roy Morgan Single Source
- Monitors which creative, websites and placements are working best
- Adheres to best-practice privacy compliance using anonymised, aggregated digital events

Product Features

De-duplicated audience
across device

Unprecedented panel size
- 19+million devices

Frequently asked questions

LIVE
AUDIENCES

How does it work?

A Roy Morgan pixel is placed in your ad or website. The pixel collects and sends back publically available data about the device used to view the ad, as well as the site or app on which the ad appears. In near real-time, the platform aggregates this information, calibrates it using data from Roy Morgan Single Source, and publishes the results to the Roy Morgan Audiences Dashboard.

Implementation is simple

PIXEL

Place the Roy Morgan pixel on website or ad creative

COLLECT

Collect all digital events from tagged creative or website

AGGREGATE

Aggregate all collected events

CALIBRATE

Calibrate and project to unique audience

EVALUATE

Evaluate results daily with deep audience profiling

ACTION

Take action to optimise campaign or website performance

What does it measure?

Roy Morgan Audiences measures and profiles all digital events where the pixel is placed. The pixel can be placed in a digital advertising campaign to measure the reach and frequency of the campaign, as well as profile who has been exposed to the campaign. Likewise the pixel can be placed in a website to help publishers better understand who visits their website.

Which ad formats are supported?

Roy Morgan Audiences currently supports display, rich media (Flash or HTML5), in-app display, and video advertising.

What metrics are available?

The platform reports on cumulative and daily counts for Unique Audience (people), Impressions and Clicks across device, location, demographics and Helix Personas, and for ad campaign, creative, placement & ad type as well.

How often is data refreshed?

The data is updated daily.

How are reports delivered?

Standard delivery is via a simple-to-use dashboard, and an API is available to connect to many well-known BI tools. All insights can also be downloaded directly from the dashboard.

What is the panel size?

More than 19 million devices, spanning desktop, mobile and tablet, across both broadband and mobile internet connections.
