ALP regains two-party preferred lead as Coalition loses ground: ALP 52% cf. L-NP 48%

In a week that saw Israeli strikes on Iran which had the potential to set off a wider war in the Middle East, two knife attacks in Sydney, and the judgment handed down against Bruce Lehrmann, the Labor Government has regained the lead with support up 3% to 52% to be ahead of the Coalition on 48% (down 3%) on a two-party preferred basis.

If a Federal Election were held now the ALP would be re-elected with a slim majority as they have now, the latest Roy Morgan survey shows.

Primary support for the ALP increased 0.5% to 30.5% but is still behind the Coalition on 35.5%, down 3%. A look at the support by gender shows women's support for the Coalition dropped significantly this week – by nearly 4% to only 32% after Justice Michael Lee handed down his judgment in the Lehrmann case. Men's support for the Coalition was down 2.5% to 39%.

Support for the Greens returned to, and marginally exceeded, its highs of two weeks ago, up 2.5% to 16% while One Nation was unchanged at 5.5%. Support for Independents was unchanged at 7.5% and support for Other Parties was unchanged at 5%.

The latest Roy Morgan survey is based on interviewing a representative cross-section of 1,617 Australian electors from April 15-21, 2024. When comparing different polls it is always important to make sure to take note of the dates when the polls are conducted to undertake a proper comparison between two polls.

Further details will be released in [Roy Morgan's weekly video update](#) presented by Roy Morgan CEO Michele Levine.

About Roy Morgan

Roy Morgan is Australia's largest independent Australian research company, with offices in each state, as well as in the U.S. and U.K. A full-service research organisation, Roy Morgan has over 80 years' experience collecting objective, independent information on consumers.

FOR IMMEDIATE RELEASE

Margin of Error

The margin of error to be allowed for in any estimate depends mainly on the number of interviews on which it is based. Margin of error gives indications of the likely range within which estimates would be 95% likely to fall, expressed as the number of percentage points above or below the actual estimate. Allowance for design effects (such as stratification and weighting) should be made as appropriate.

Sample Size	Percentage Estimate			
	40%-60%	25% or 75%	10% or 90%	5% or 95%
1,000	±3.0	±2.7	±1.9	±1.3
2,000	±2.2	±1.9	±1.3	±1.0
60,000	±0.4	±0.4	±0.2	±0.2
