ALP maintains election winning lead over Coalition in early May for third straight week: ALP 52% cf. L-NP 48%

The Albanese Labor Government has retained the lead for the third week in a row with support on 52% (unchanged) ahead of the Coalition on 48% (unchanged) on a two-party preferred basis.

If a Federal Election were held now the ALP would be re-elected with a slim majority as they have now, the latest Roy Morgan survey shows.

Despite a clear election winning lead, primary support for the ALP dipped 1.5% to 30% this week. The news early last week that a grandmother in Perth had been bashed in a home invasion by a freed immigration detainee put further pressure onto the government's policy on immigration detention over the week. Support for the Coalition increased 0.5% to 37% while support for the Greens dropped 1% to 13%.

Looking at the minor parties, support for One Nation was up 0.5% to 6%. Support for Independents was up 0.5% to 8.5% and support for Other Parties was up 1% to 5.5%.

The latest Roy Morgan survey is based on interviewing a representative cross-section of 1,666 Australian electors from April 29 – May 5, 2024. When comparing different polls it is always important to make sure to take note of the dates when the polls are conducted to undertake a proper comparison between two polls.

Further details will be released in [Roy Morgan's weekly video update](#) presented by Roy Morgan CEO Michele Levine.

About Roy Morgan

Roy Morgan is Australia's largest independent Australian research company, with offices in each state, as well as in the U.S. and U.K. A full-service research organisation, Roy Morgan has over 80 years' experience collecting objective, independent information on consumers.

Margin of Error

The margin of error to be allowed for in any estimate depends mainly on the number of interviews on which it is based. Margin of error gives indications of the likely range within which estimates would be 95% likely to fall, expressed as the number of percentage points above or below the actual estimate. Allowance for design effects (such as stratification and weighting) should be made as appropriate.

Sample Size	Percentage Estimate			
	40%-60%	25% or 75%	10% or 90%	5% or 95%
1,000	±3.0	±2.7	±1.9	±1.3
2,000	±2.2	±1.9	±1.3	±1.0
60,000	±0.4	±0.4	±0.2	±0.2
